

Laposhin Vladislav

AI / LLM Engineer (Middle+)

Telegram: @rize02 | GitHub: github.com/renosaza | Portfolio: renosaza.github.io

3 years 2 months of project work | Remote | Python, LLM systems, backend

Profile

AI and backend engineer with 3 years and 2 months of project work. Built dialogue assistants, API integrations and data-processing services. Wrote Python backend code, connected LLMs to tools and knowledge sources, deployed services and checked production behavior. Worked with client requirements, technical constraints and incomplete source data.

Skills

- Python, FastAPI, REST APIs, PostgreSQL, Redis, background jobs, authentication and file processing.
- Prompt design, structured output, function and tool calling, agents, context management and response routing.
- RAG, embeddings, retrieval pipelines, data normalization, document processing and quality checks.
- MCP tool contracts, external API integrations and backend services for LLM applications.
- Linux, Docker, nginx, Git, CI/CD, logging, smoke tests, UI tests and production diagnostics.

Relevant experience

AI assistants and workflow automation

AI / Backend Engineer

- Built assistants for web, Telegram and internal workflows with APIs, documents, forms, notifications and business rules.
- Implemented tool and function calling, request routing, prompt templates, structured responses and context handling.
- Wrote Python services for LLM APIs, databases and external systems. Added error handling, logs and fallback paths.
- Tested prompts and agent flows against prepared cases and end-to-end user scenarios.

Geospatial platform and batch geocoder

Backend / Data Engineer

- Developed a web platform that combines domain records, maps, search, validation and backend workflows.
- Built an XLSX, XLS and CSV pipeline that detects address columns, normalizes data, runs batch geocoding and flags low-confidence results for review.
- Deployed the geocoder as an isolated service in an existing production environment and checked it with logs, smoke tests and UI scenarios.

Backend services and internal tools

Backend Engineer

- Developed REST APIs, database integrations, background jobs, file-processing flows and reporting utilities.
- Replaced repeated manual steps with scripts and services that preserve state and produce readable logs.
- Documented service boundaries, data contracts, deployment steps and recovery procedures for team use.

Education

Far Eastern Federal University (FEFU), Institute of Mathematics and Computer Technologies. Currently studying toward a higher-education degree.
