

PROFILE

AI-oriented backend engineer building applied software, dialogue assistants and LLM integrations. I work across the full delivery cycle: process analysis, architecture, Python backend, tool and function calling, context enrichment, structured output, quality checks, deployment, logging and production diagnostics.

CONTACT

Telegram: @rize02
GitHub: github.com/renosaza
Portfolio: renosaza.github.io

CORE STACK

Python / Java / Rust / SQL
FastAPI / REST APIs / PostgreSQL / Redis
Linux / Docker / nginx / CI/CD
LLM APIs / RAG / Tools / Embeddings

KEY EXPERTISE

LLM SYSTEMS

Prompt design, structured output, function/tool calling, agents, context management, RAG, embeddings and evaluation.

INFRASTRUCTURE

Linux, Docker, nginx, CI/CD, logs, smoke checks, observability and production incident diagnostics.

SELECTED PROJECT EXPERIENCE

AI ASSISTANTS & WORKFLOW AUTOMATION

Dialogue assistants connected to APIs, documents, forms and internal workflows. Tool calling, routing, context handling, prompt templates, structured responses and test scenarios.

GEOSPATIAL PLATFORM & BATCH GEOCODER

Map-centered operational platform and backend geocoding pipeline for XLSX/XLS/CSV data: address detection, normalization, confidence checks, review flows and production export.

PARAGON TERMINAL AI KERNEL

Architecture and compiled Rust workspace scaffold for an AI terminal kernel: provider boundary, agent runtime, permissions, session event log, Git visibility and MCP/module layers.

EDUCATION

Far Eastern Federal University (FEFU), Institute of Mathematics and Computer Technologies - currently studying.

BACKEND

Python, FastAPI, REST APIs, PostgreSQL, Redis, background jobs, authentication, file processing and integrations.

DATA & DOCUMENTS

Tabular data, document workflows, normalization, structured extraction, validation and retrieval pipelines.

PROJECT AND CLIENT WORK

PRIVATE / INTERNAL PROJECT

OPEN-SOURCE PROJECT
